

Reconfiguration/leadership metrics -- hardware (15/30 usable runs) vs. simulation (30 seeds), n=5, lj_baseline

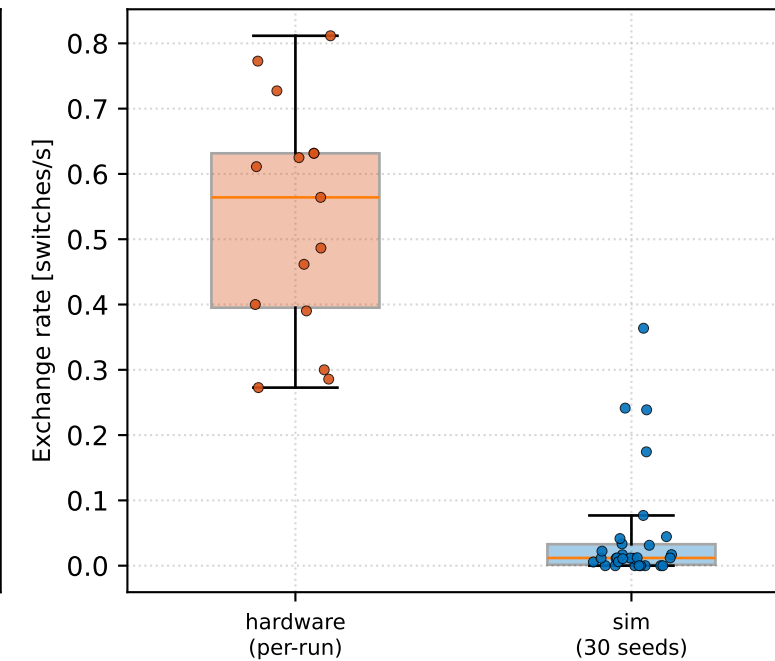

Metric 1 -- Voelkl et al.
lead/follow time correlation

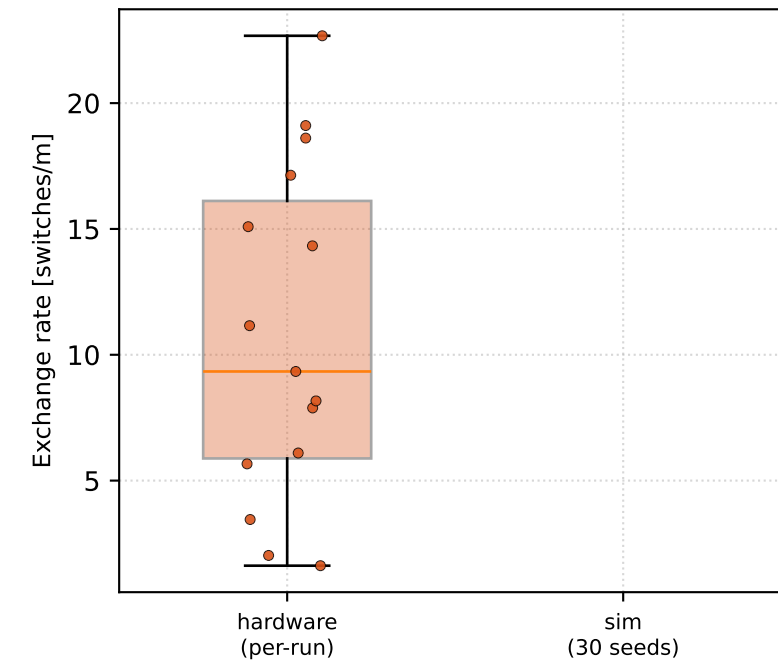

Metric 3 -- front-rank
occupancy entropy

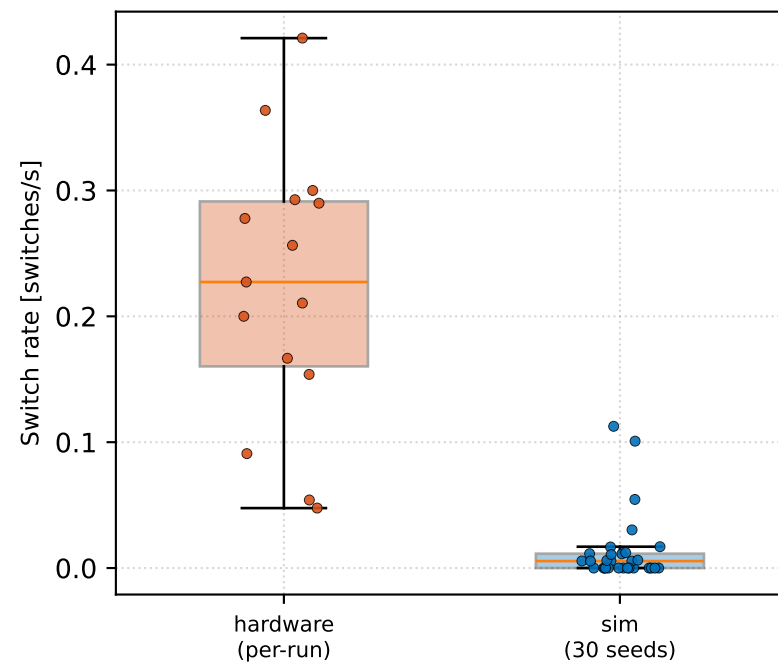

Metric 3 -- raw front-exchange rate
(per second)

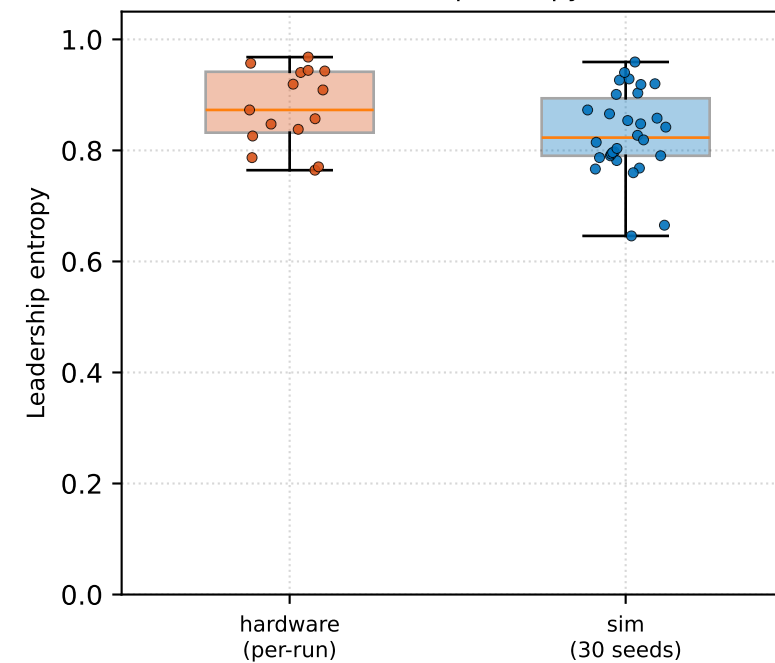

Metric 3 -- raw front-exchange rate
(per metre travelled)

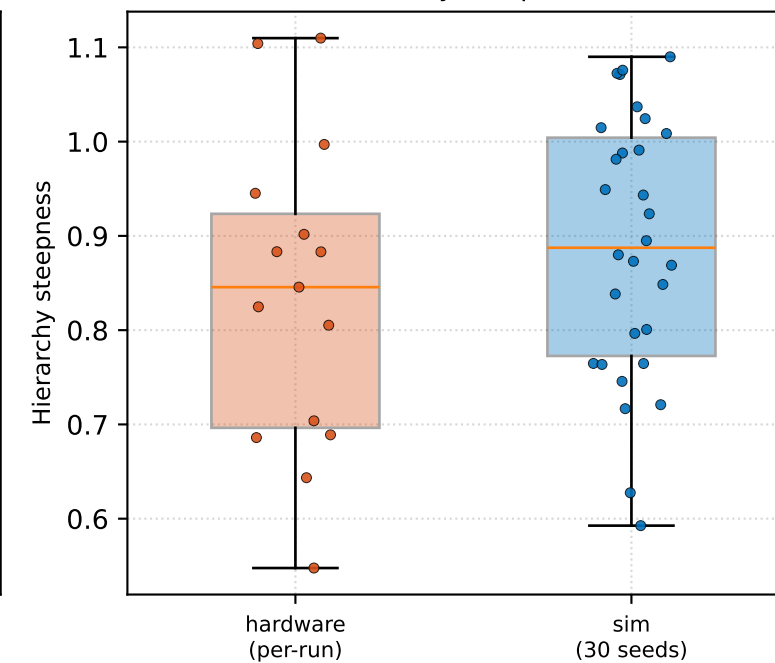

Metric 4 -- persistence-filtered
hand-off rate

Metric 2 -- directional-correlation
leadership entropy

Metric 2 -- directional-correlation
hierarchy steepness

Data quality caveat:
hardware segments are much shorter than sim
